1.0 INTRODUCTION

The purpose of this National Certification Test Report is to document the results of the certification testing performed on Election Systems & Software's (ES&S), herein referred to as manufacturer, Election Systems & Software Voting System 5.4.0.0 (EVS5400). EVS 5.4.0.0 was tested to the requirements set forth in the U.S. Election Assistance Commission (EAC) 2005 Voluntary Voting System Guidelines Standards (2005 VVSG). EVS 5.4.0.0 is a modification to the previously 2005 VVSG certified EVS 5.2.0.0 voting system (Certification number: ESSEVS5200), and was tested by NTS Huntsville based on the "modified system" requirements set forth in section 4.6.2.3 of the EAC Testing and Certification Program Manual, Version 2.0, herein referred to as the Program Manual.

1.1 Description of EAC Certified System Being Modified

The following subsection describes the EAC Certified System that is baseline for the submitted modification. All information was derived from the previous Certification Test Report and/or EAC Certificate of Conformance.

1.1.1 Baseline Certified System

The baseline system for this modification is the EVS 5.2.0.0. Tables 1-1 and 1-2 describe both the baseline certified software versions and the hardware/firmware versions submitted for certification testing. For a complete description of the configuration and description of the EVS 5.2.0.0 product, refer to the EVS 5.2.0.0 Test Report located on the EAC's website at <http://www.eac.gov>.

(The remainder of this page intentionally left blank)

1.1.1 Baseline Certified System (Continued)

Table 1-1 Baseline Certified Software Versions

| Software Component | Software/Firmware Version |
|---|---------------------------|
| Proprietary Software | |
| Electionware | 4.6.0.0 |
| Election Reporting Manager (ERM) | 8.11.0.0 |
| Event Log Service | 1.5.5.0 |
| Removable Media Service (RMS) | 1.4.5.0 |
| ExpressVote Previewer | 1.4.0.0 |
| VAT Preview | 1.8.6.0 |
| COTS Software | |
| Adobe Acrobat Standard | 11 |
| Cerberus FTP | 6.0.7.1 |
| Microsoft Server 2008 | R2 w/ SP1 |
| Microsoft Windows 7 | 64-bit/ SP1 |
| WSUS Microsoft Windows Offline Update Utility | 8.8 |
| Micro Focus RM/COBOL Runtime | 12.06 |
| Symantec Endpoint Protection | 12.1.4 |

Table 1-2 Baseline Certified Hardware/Firmware Versions

| Hardware Component | Hardware Version | Firmware Version |
|---|-------------------------|------------------|
| Proprietary Hardware | | |
| ExpressVote: Universal Voting System | 1.0 | 1.4.0.0 |
| DS200: Precinct Count Scanner | 1.2.1, 1.2.3, and 1.3 | 2.12.0.0 |
| DS850: Central Count Scanner | 1.0 | 2.10.0.0 |
| AutoMARK A100: Accessible Voting Station | 1.0 | 1.8.6.0 |
| AutoMARK A200 (SBC 2.0 & SBC 2.5) : Accessible Voting Station | 1.1 | 1.8.6.0 |
| AutoMARK A300 (SBC 2.0 & SBC 2.5) : Accessible Voting Station | 1.3 | 1.8.6.0 |
| Plastic Ballot Box | 1.2 & 1.3 | N/A |
| Metal Ballot Box | 1.0, 1.1, & 1.2 | N/A |
| COTS Hardware | | |
| EMS Server – Dell | PowerEdge T710 | N/A |
| EMS Reporting Workstation – Dell | OptiPlex 980 | N/A |
| EMS Reporting Laptop – Dell | E6410 | N/A |
| Motorola QR Code Scanner | DS9208 | N/A |
| Delkin USB Flash Drives | 512 MB, 1, 2, 4, & 8 GB | N/A |
| Delkin Compact Flash | 1 GB | N/A |
| DS850 Report Printer | OKI B430dn & B431dn | N/A |
| DS850 Audit Printer | OKI Microline 420 | N/A |
| Avid Headphones | Avid FV 60 | N/A |
| SanDisk CF Card Reader | 018-6305 | N/A |

1.3 Terms and Abbreviations

Table 1-3 defines all terms and abbreviations applicable to this Test Report.

Table 1-3 Terms and Abbreviations

| Term | Abbreviation | Definition |
|--|--------------|---|
| Anomaly | -- | Any non-repeatable testing event that is not the expected result or interrupts the test operations. |
| Americans with Disabilities Act 1990 | ADA | ADA is a wide-ranging civil rights law that prohibits, under certain circumstances, discrimination based on disability. |
| Configuration Management | CM | Systems engineering process for establishing and maintaining consistency of a product's performance, functional and physical attributes with its requirements, design and operational information throughout its life. |
| Commercial Off-the-Shelf | COTS | Commercial, readily available hardware or software. |
| Cast Vote Record | CVR | Permanent record of all votes produced by a single voter whether in electronic, paper, or other form. Also referred to as ballot image when used to refer to electronic ballots. |
| Deficiency | -- | Any repeatable test result that was not the expected result or violates a requirement of the 2005 VVSG. |
| Direct-Recording Electronic | DRE | An electronic voting system that utilizes electronic components for the functions of ballot presentation, vote capture, vote recording, and tabulation which are logically and physically integrated into a single unit. A DRE produces a tabulation of the voting data stored in a removable memory component and in printed hardcopy. |
| United States Election Assistance Commission | EAC | Commission created per the Help America Vote Act of 2002, assigned the responsibility for setting voting system standards and providing for the voluntary testing and certification of voting systems. |
| ES&S Event Log Service | ELS | ES&S Event Log Service is a Windows Service that runs in the background of any active ES&S Election Management software application to monitor the proper functioning of the Windows Event Viewer |
| Election Management System | EMS | Within the EVS 5.4.0.0 voting system, the EMS is comprised of five components: Electionware, ERM, ES&S Event Log Service, VAT Previewer, and ExpressVote Previewer. |
| Election Reporting Manager | ERM | EMS reporting component. |
| Election Systems and Software | ES&S | --- |
| Engineering Change Order | ECO | --- |
| Equipment Under Test | EUT | Refers to the individual system component or multiple piece of the same component |
| ES&S Voting System | EVS | --- |
| ES&S Export Utility | EXP | Export utility, part of ERM |
| Functional Configuration Audit | FCA | Verification of system functions and combination of functions cited in the manufacturer's documentation. |
| Help America Vote Act | HAVA | Act created by United States Congress in 2002. |
| Intelligent Mark Recognition | IMR | Visible light scanning technology to detect completed ballot targets. |
| National Institute of Standards and Technology | NIST | Government organization created to promote U.S. innovation and industrial competitiveness by advancing measurement science, standards, and technology in ways that enhances economic security and improves our quality of life. |

1.3 Terms and Abbreviations (Continued)

Table 1-3 Terms and Abbreviations (Continued)

| Term | Abbreviation | Definition |
|---|--------------|---|
| Notice of Deviation | NOD | A NTS quality controlled document used to identify, access and describe any identified Anomaly or Deficiency witnessed by the VSTL during testing. |
| Notice of Clarification | NOC | Provides further guidance and explanation on the requirements and procedures of the EAC's Voting System Certification or Voting System Testing Laboratory programs. |
| Physical Configuration Audit | PCA | Review by accredited test laboratory to compare voting system components submitted for certification testing to the manufacturer's technical documentation, and confirmation the documentation meets national certification requirements. |
| Personal Computer | PC | Computer component of the EVS 5.4.0.0 voting system. |
| Quality Assurance | QA | Administrative and procedural activities implemented as a way of preventing mistakes or defects. |
| Quantity | QTY | Number/Count of items |
| Quick Response Code | QR Code | Two-dimensional barcode |
| Request for Interpretation | RFI | A means by which a registered Manufacturer or Voting System Test Laboratory (VSTL) may seek clarification on a specific Voluntary Voting System Guidelines (VVSG) standard. |
| System Under Test | SUT | Refers to the system as a whole (all components) |
| Technical Data Package | TDP | Manufacturer documentation related to the voting system required to be submitted as a precondition of certification testing. |
| Trusted Build | --- | Final build of source code performed by a trusted source and overseen by the manufacturer, which is delivered to the EAC designated repository; also referred to as a "Witness Build". |
| Underwriters Laboratories Inc. | UL | Safety consulting and certification company |
| Uninterruptible Power Supply | UPS | Electrical apparatus providing emergency power when an input power source fails. |
| Voter Assist Terminal | VAT | The electronic ballot marking device component is the ES&S AutoMARK. |
| National Technical Systems, Inc. | NTS | --- |
| National Voluntary Laboratory Accreditation Program | NVLAP | Program that provides an unbiased third-party test and evaluation program to accredit laboratories in the respective fields to ISO 17025 standard. |
| NTS Operating Procedure | OP | NTS Test Method or Test Procedure. |
| Virtual Review Tool | VRT | Test campaign management software used by the EAC and vendors applying for qualification testing. |
| Voting System Test Laboratory | VSTL | NTS |
| Voluntary Voting System Guidelines | VVSG | EAC Voluntary Voting System Guidelines Version 1.0. |

2.0 CERTIFICATION TEST BACKGROUND

NTS Huntsville, an independent testing laboratory, assesses systems and components under harsh environments to include dynamic and climatic extremes and test electronic voting systems. NTS Huntsville holds the following accreditations:

- ISO-9001:2008
- NVLAP Accredited ISO 17025:2005
- EAC Accredited VSTL, NIST 150,150-22
- A2LA Accredited (Certification No.'s 0214.40, 0214.41, and 0214.42)
- FCC Approved Contractor Test Site (Part 15, 18)

2.1 Revision History

Table 2-1 describes the version history of the submitted voting system.

Table 2-1. Revision History

| System Version | Certification Type | System Modified | Certification Date | Certification Number |
|----------------|--------------------|-----------------|--------------------|----------------------|
| EVS 5.0.0.0 | New System | Original | 05/16/2013 | ESSEVS5000 |
| EVS 5.0.1.0 | Modification | EVS 5.0.0.0 | 03/18/2014 | ESSEVS5010 |
| EVS 5.2.0.0 | Modification | EVS 5.0.0.0 | 07/02/2014 | ESSEVS5200 |
| EVS 5.4.0.0 | Modification | EVS 5.2.0.0 | TBD | ESSEVS5400 |

2.2 Scope of Testing

The focus of the test campaign was to verify functionality of EVS 5.4.0.0 submitted by the manufacturer for EAC certification.

This report is valid only for the system identified in Section 1.1 Description of EAC Certified System being modified. Any changes, revisions, or corrections not listed in this report or made to the system after this evaluation, are required to be submitted to the EAC for assessment.

2.2.1 Modification Overview

Modifications to the voting system include changes to address conformance with new RFIs released before application submission, functional upgrades, software fixes, software to enhance usability, and replacement of hardware parts nearing end-of-life. This modification includes a new hardware component with two operating modes: the ExpressVote 2.0 Tabulator and the ExpressVote 2.0 Marker. A full description of submitted modifications can be found in Appendix E – Details of Submitted Modifications. Additional testing on the ExpressVote was requested by the EAC to prove the ability to reliably manufacture these units. ExpressVote 2.0 was replaced by ExpressVote 2.1 to eliminate the EMC concerns and be reproduced/manufactured in a consistent and reliable manner. This testing and the results can be found in the respective test section of the test report.

2.2.2 Test Materials

EVS 5.4.0.0 Proprietary and COTS software submitted by the manufacturer for testing are listed in Table 2-2. Proprietary and COTS hardware are listed in Table 2-3.

Table 2-2. Proprietary and COTS Software

| Software | Software/Firmware Version | Installed Environment |
|--|---------------------------|------------------------------|
| Proprietary Software | | |
| Electionware | 4.8.0.0 | Client / Standalone |
| Election Reporting Manager (ERM) | 8.13.0.0 | Client / Standalone |
| ES&S Event Log Service (ELS) | 1.5.6.0 | Client / Standalone |
| Removable Media Service (RMS) | 1.4.6.0 | Client / Standalone |
| VAT Previewer | 1.8.7.0 | Client / Standalone |
| ExpressVote Previewer | 2.1.0.0 | Client / Standalone |
| COTS Software | | |
| Adobe Acrobat Standard | 11 | Client / Standalone |
| Cerberus FTP | 8.0.6 (x64) | Client / Standalone / Server |
| Microsoft Server 2008 | R2 w/ SP1 | Client / Standalone / Server |
| Microsoft Windows 7 | 64-bit, SP1 | Client / Standalone |
| WSUS Microsoft Windows Offline Update Utility | 10.7.4 | Client / Standalone / Server |
| RM/COBOL Runtime | 12.06 | Client / Standalone |
| Symantec Endpoint Protection | 12.1.6 | Client / Standalone / Server |
| Symantec Endpoint Protection Intelligent Updater | 20160829-002-v5i64 | Client / Standalone / Server |

2.2.3 Test Block Diagram

EVS 5.4.0.0 is an integrated suite of election management products, as depicted in Figure 2-1.

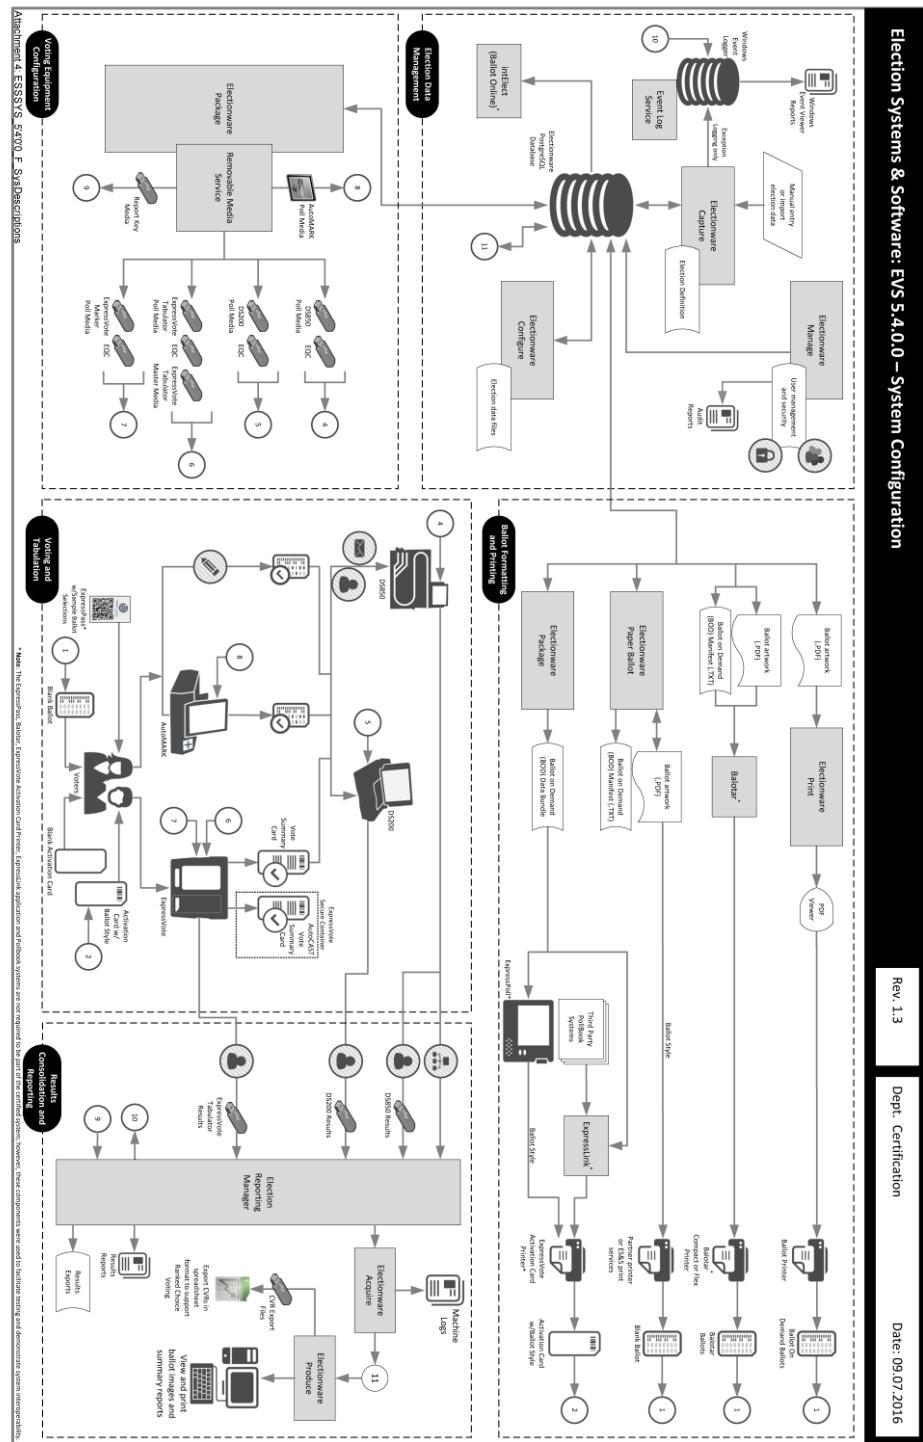

Figure 2-1. Visual System Overview

2.2.3 Test Block Diagram (continued)

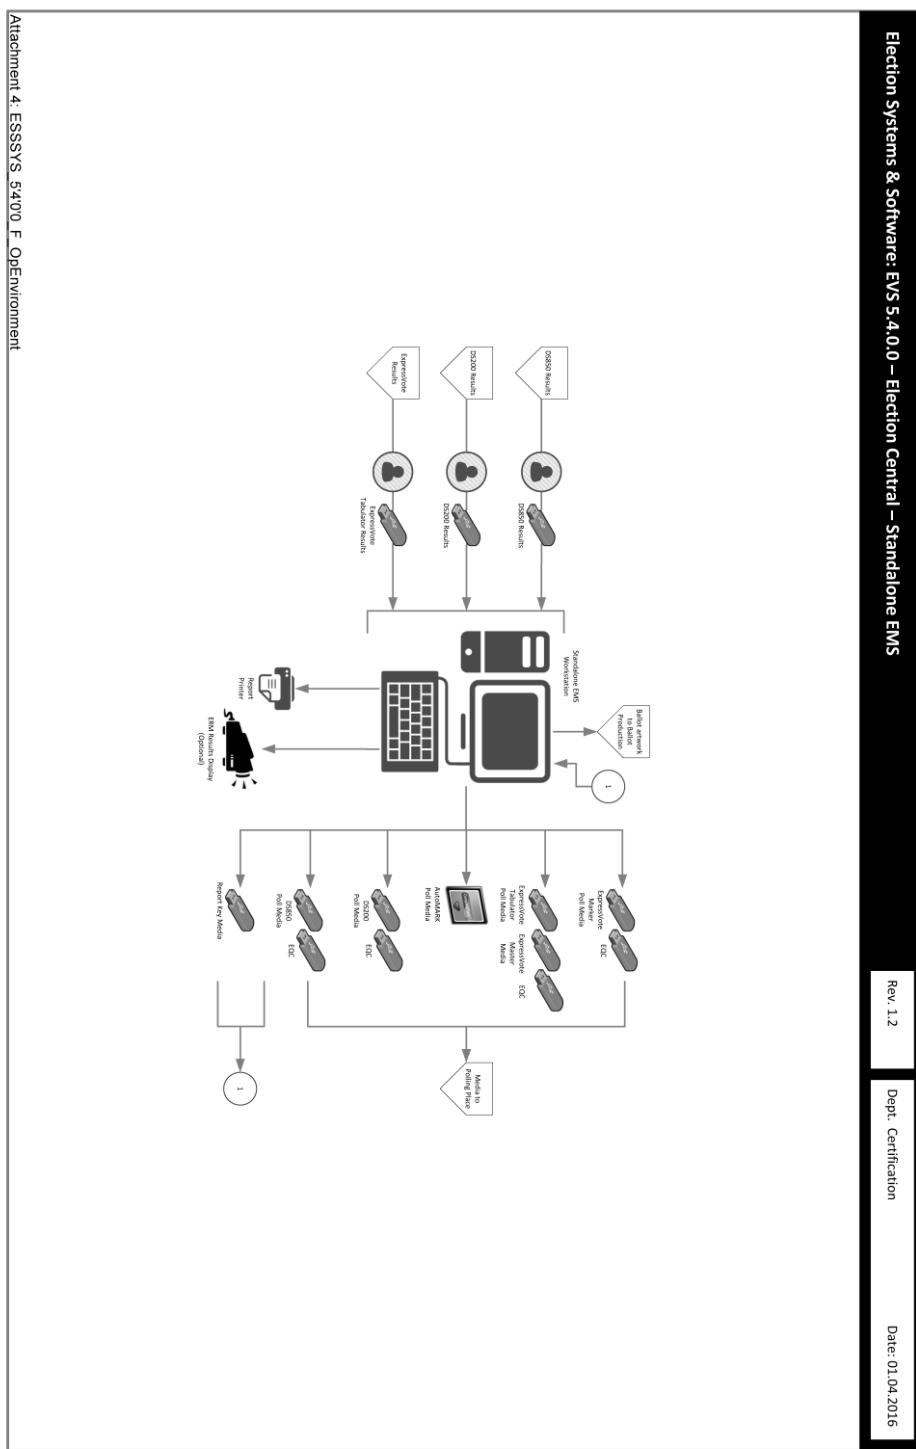

Figure 2-2. Standalone EMS Workstation

2.2.4 Supported Languages

The submitted voting system supports English, Spanish, Chinese, Korean, Japanese, and Hindi languages.

2.2.5 RFIs

Table 2-5 lists the applicable RFIs the EAC has released as of the date of the report as it pertains to this test campaign.

Table 2-5. Applicable RFIs

| RFI ID | Name |
|---------|---|
| 2007-01 | EAC Decision on Accessible Design |
| 2007-02 | EAC Decision on Variable Names |
| 2007-03 | EAC Decision on Summative Usability Testing |
| 2007-04 | EAC Decision on Presentation of Alternative Language |
| 2007-05 | EAC Decision on Testing Focus and Applicability |
| 2007-06 | EAC Decision on Recording and Reporting Undervotes |
| 2008-01 | EAC Decision on Temperature and Power Variation |
| 2008-02 | EAC Decision on Battery Backup for Optical Scan Voting Machines |
| 2008-03 | EAC Decision on OS Configuration |
| 2008-04 | EAC Decision on Supported Languages |
| 2008-05 | EAC Decision on Durability |
| 2008-06 | EAC Decision on Battery Backup for Central Count |
| 2008-07 | EAC Decision on "0" Count to Start Election |
| 2008-08 | EAC Decision on Automatic Bar Code Readers |
| 2008-09 | EAC Decision on Safety Testing |
| 2008-10 | EAC Decision on Electrical Fast Transient |
| 2008-12 | EAC Decision on Ballot Marking Device/Scope of Testing |
| 2009-01 | EAC Decision on VVPAT Accessibility |
| 2009-02 | EAC Decision on Alternate Languages |
| 2009-03 | EAC Decision on Battery Back Up for Central Count Systems |
| 2009-04 | EAC Decision on Audit Log Events |
| 2009-05 | EAC Decision on T-Coil Requirements |
| 2009-06 | EAC Decision on Temperature and Power Variation |
| 2010-01 | EAC Decision on Voltage Levels and ESD Test |
| 2010-02 | EAC Decision on Coding Conventions |
| 2010-03 | EAC Decision on Database Coding Conventions |
| 2010-04 | EAC Decision on Functional Requirements with Respect to Security |
| 2010-05 | EAC Decision on Testing of Modifications to a Certified System |
| 2010-06 | EAC Decision on DRE Accessibility Requirements and Other Accessible Voting Stations |
| 2010-07 | EAC Decision on Module Length |
| 2010-08 | EAC Decision on Calling Sequence |
| 2012-01 | EAC Decision on Ballot Handling - Multifeed |
| 2012-03 | EAC Decision on Configuration Management of COTS Products |
| 2012-04 | EAC Decision on Software Setup Validation |
| 2013-02 | EAC Decision on Audio Presentation Volume Levels |
| 2013-03 | EAC Decision on Timestamps |
| 2013-04 | EAC Decision on Usability Testing |

2.2.6 NOCs

Table 2-6 lists the applicable NOCs the EAC has released as of the date of the report as it pertains to this test campaign.

Table 2-6. Applicable NOCs

| NOC ID | Name |
|----------|---|
| 2007-001 | Timely Submission of Certification Application |
| 2007-003 | State Testing Done in Conjunction with Federal Testing within the EAC Program |
| 2007-005 | Voting System Test Laboratory Responsibilities in the Management and Oversight of Third Party Testing |
| 2008-001 | Validity of Prior Non-core Hardware Environmental and EMC Testing |
| 2008-003 | EAC Conformance Testing Requirements |
| 2009-001 | Requirements for Test Lab Development and Submission of Test Plans |
| 2009-002 | Laboratory Independence Requirement |
| 2009-004 | Development and Submission of Test Reports |
| 2009-005 | Development and Submission of Test Plans for Modifications to EAC Certified Systems |
| 2013-01 | Discrepancy Listing in Test Report |
| 2013-02 | Detailed Description of Changes for Modifications |

(The remainder of this page intentionally left blank)

3.0 TEST FINDINGS

EVS 5.4.0.0, as identified in Section 2.2.1 of this report, was subjected to the tests as summarized in this section.

3.1 Deficiencies and Resolutions

NTS Huntsville defines a deficiency as any repeatable test result or event that is counter to the expected result or violates the specified requirements. Deficiencies are tracked using the NTS NOD process and are provided to the EAC for disposition and resolution.

During non-operational hardware testing, the ExpressVote 2.0 failed EMC testing multiple times, as referenced in Appendix B: NOD 1, NOD 3, NOD 5, NOD 6, NOD 7, and NOD 8. ES&S implemented several mitigations and retested each mitigation of the equipment. After several rounds of retesting, the equipment with mitigations passed the testing, but EAC raised concerns about the ability to reproduce the proposed mitigations in production. EAC requested to pull an additional 5 production units for EFT, Electrostatic Disruption, Electrical Power Disturbance, FCC Radiated and Conducted emissions. Three out of the five units selected for testing failed this suite of EMC tests.

At this time, ES&S chose to withdraw ExpressVote 2.0 from testing for analysis and engineering changes. After a thorough review, ES&S re-engineered the wiring and grounding schemes on the boards. This new version of the ExpressVote is known as 2.1.

3.2 Details of Hardware Modifications

ES&S performed a complete ESD evaluation and mitigation of the ExpressVote Tabulator 2.0. This evaluation revealed problems with the grounding schemes of the Printed Circuit Boards, the shielding and composition of several of the cables, and deficient connections to the chassis of the unit, causing ESD energy to be improperly routed through the ExpressVote. As a result of this substantial redesign of the grounding scheme for the ExpressVote 2.0 hardware configuration, ExpressVote 2.0 has been eliminated from future production plans and replaced by ExpressVote 2.1 for all future production.

3.2 Details of Hardware Modifications (Continued)

The modifications required for the ExpressVote 2.1 system consisted of the following:

1. Isolate Earth Ground from Voltage Reference/Return on PC Boards
 - a. The USB ports of the SPE and the USB hub (which then goes to the report printer and 2D scanner) had their shield tied to both Earth ground and board voltage reference/return going through the mounting hole closest to those connectors. Being tied to board voltage reference/return allows noise to propagate through the PC board, instead of just leaving the board. All boards were modified according to IPC-A-610 industry standards through a contract manufacturer.
2. Improve Mechanical Connections to Earth Ground to Allow More Favorable Charge Flow Path
 - a. The USB cables from the IOB to the side panel showed a small air gap between the connector shell and the panel they are mounted to. This resulted in a flow path that was not controlled. Modifications were made to the cables to force solid contact of the USB cables' connector shield to the panel and to extend the actual cables shield further into the connector.
3. Component Protection (chip level)
 - a. Individual devices are susceptible to damage with large current and voltage spikes. These spikes can cause a large voltage differential on the conductors in a cable. ES&S demonstrated ExpressVote 2.0 exhibited vulnerabilities with USB communication and took steps to protect these devices driving the USB communication. A modification was made to tie the isolated USB voltage reference to the shield of the USB cable/connector.
4. Increase Isolation by Physical Separation or Material Change
 - a. The ExpressVote 2.0 exhibited issues with the side door lock and ESD. The cover over the USB sticks in the side compartment was metallic. For ExpressVote 2.1, ES&S replaced the original cover with one produced from a non-conductive material.
5. Reduced Impedance from Earth Ground Path
 - a. In the chassis power cable assembly to the report printer and USB hub, ExpressVote 2.0 had the earth ground wires routed through a ferrite to protect the power delivered to the UBS hub and printer. In ExpressVote 2.1, the ferrite was relocated to address USB and power individually instead of earth ground return.
6. Twisted Pair Cable
 - a. Good practice is to use twisted pair cables. It allows noise that is induced on a cable to be shared between both conductors. In the ExpressVote 2.1, twisted cables were used between the IOB and the USB hub and the report printer.
7. Paper Path Module
 - a. The ExpressVote 2.0 Paper Path Module exhibited susceptibility to ESD from the front door lock and the anti-static brushes. With ExpressVote 2.1, the earth to ground resistance was reduced by adding a ground strap cable to the Paper Path Module to eliminate the prior ESD issues.

All testing was performed on the ExpressVote 2.0 units. EAC requested that NTS conduct the EMC tests on 5 ExpressVote 2.1 units; therefore, only the EMC tests were performed on the ExpressVote 2.1 units.

3.3 Additional Hardware Testing

Additional hardware testing of the modified systems was performed as specified in Table 3-1. The additional hardware testing of five components was to ascertain the manufacturability of the ExpressVote 2.1. See Table 3-1.

Table 3-1. Additional Hardware Testing

| Equipment Under Test | Requested Testing | Result |
|---|--|--------|
| ExpressVote 2.1 (with Rolling Kiosk) | Electrical Supply 4.1.2.4 | Pass |
| | Electrical Power Disturbance 4.1.2.5 | Pass |
| | Electrical Fast Transient 4.1.2.6 | Pass |
| | Lightning Surge 4.1.2.7 | Pass |
| | Electrostatic Disruption 4.1.2.8 | Pass |
| | Electromagnetic Emissions (Radiated and Conducted) 4.1.2.9 | Pass |
| | Electromagnetic Susceptibility 4.1.2.10 | Pass |
| | Conducted RF Immunity 4.1.2.11 | Pass |
| | Magnetic Field Immunity 4.1.2.12 | Pass |
| | | |

Summary Findings

The testing listed in Table 3-1 established that the modified EUT functioned as described and did not introduce any errors into the system. NTS asserts that the ExpressVote 2.1 has eliminated the EMI/EMC concerns of its predecessor, ExpressVote 2.0, and can now be reproduced/manufactured in a consistent and reliable manner. In addition, the ExpressVote 2.1 software was found to comply with the source code requirements of the 2005 VVSG.

3.4 Additional Security Testing

Additional security testing pertaining to the RSA encryption library was performed as specified in Table 3-2.

Table 3-2. Additional Security Testing

| Equipment Under Test | Requested Testing | Result |
|----------------------|--------------------|--------|
| EMS | RSA Crypto testing | Pass |

Summary Findings

The testing listed in Table 3-2, testing was performed to analyze use of the RSA encryption library. The EMS components were found to be in compliance with the security requirements of the EAC 2005 VVSG.

(The remainder of this page intentionally left blank)

3.5 Hardware Testing

Hardware requirements and environmental condition categories applicable to the design and operation of voting systems are detailed in Table 3-3. For applicable hardware versions, reference Table 2-3.

Table 3-3. Voting Systems Hardware Requirements and Environmental Conditions

| Hardware Requirements | Environmental Conditions (Applicable to Design and Operation) |
|--------------------------------------|--|
| Shelter | Natural environment: Including temperature, humidity, and atmospheric pressure |
| Space | Induced environment: Including proper and improper operation and handling of the system and its components during the election processes |
| Furnishings and fixtures | |
| Supplied energy | Transportation and storage |
| Environmental control | Electromagnetic signal environment: Including exposure to and generation of radio frequency energy |
| External telecommunications services | |

Procedural summaries and summary test results within this report verify that the Equipment Under Test (EUT) submitted for certification testing meets the hardware requirements of the 2005 VVSG.

Receipt inspection and evaluation of voting system documentation was conducted prior to the start of the testing sequence. Operational tests/checks to verify system performance and function were performed throughout testing. Environmental tests were conducted to ensure that climatic and physical occurrences would not affect system structure or functionality. Electromagnetic Compatibility (EMC) tests were conducted to ensure continued system operation and reliability in the presence of abnormal electrical conditions.

(The remainder of this page intentionally left blank)

3.5.1 Temperature Power Variation/Data Accuracy

Temperature and Power Variation testing was performed in accordance with Volume I Section 4.1.2.13 and Volume II Section 4.7.1 of the 2005 VVSG, including considerations for RFI 2008-01 and RFI 2009-06. This test is similar to the procedure of MIL-STD-810D, Method 502.2 and 501.2.

The purpose of this test was to simulate stresses associated with operating the EUT at varying temperatures and voltages. EUT were placed inside a walk-in environmental test chamber and connected to a variable voltage power source. Operational functions were continuously exercised during the test by the casting of ballots.

The Temperature Power Variation test was conducted on the ExpressVote 2.0 (3 units). For each test, the EUT was utilized for a period of 64 hours, as described in EAC RFI 2008-01 to achieve the cumulative duration of at least 163 hours. The first 48 hours were conducted in the environmental test chamber where hardware was subjected to temperatures inside the chamber ranging from 50°F to 95°F and voltage varied from 105 VAC to 129 VAC. The remaining 16 hours were operated in ambient conditions.

In addition, the Data Accuracy Test was conducted for ExpressVote 2.0 (3 units) and was run in conjunction with the Temperature Power Variation Test. The Data Accuracy test was performed in accordance with the requirements of Section 4.7.1.1 of the Volume II of the VVSG. Per the 4.7.1.1, data accuracy is defined in terms of ballot position error rate. This rate applies to the voting functions and supporting equipment that capture, record, store, consolidate, and report the selections (or absence thereof) made by the voter for each ballot position. To meet the requirements of this test, the voting system must be subjected to the casting of a large number of ballots to verify vote recording accuracy, i.e. at least 1,549,703 ballot positions correctly read and recorded. Table 3-4 details the ballots cast and their total ballot positions.

Table 3-4 Accuracy Test

| Ballot/Session Type | No. of times cast | No Ballot Positions | No. of EUT | No. Times Voted per EUT | Total ballot Positions | Documented Error Count |
|---------------------|-------------------|---------------------|------------|-------------------------------|------------------------|------------------------|
| Pre-Voted Ballot | 20 | 133 | 3 | 64 | 510,720 | 0 |
| Manual Voted | 20 | 133 | 3 | 64 | 510,720 | 0 |
| QR Code | 22 | 133 | 3 | 64 | 561,792 | 0 |
| | | | | Total Ballot Positions | 1,583,232 | |

Summary Findings

The ExpressVote 2.0 met the requirements of the Temperature Power Variation Test without any degradation to structure and/or performance capability. In addition, the ExpressVote 2.0 met the Accuracy requirements of the 2005 VVSG.

3.5.2 Low Temperature

Low Temperature testing was performed in accordance with Volume I Section 4.1.2.14 and Volume II Section 4.6.4 of the 2005 VVSG and is equivalent to MIL-STD-810D, Method 502.2, Procedure I-Storage. The purpose of this test was to simulate stresses associated with the storage of voting machines and ballot counters with a minimum temperature of -4°F.

The Low Temperature test was conducted on the ExpressVote 2.0 (1 unit). For each test, the EUT was placed inside an environmental test chamber and the temperature was adjusted to maintain standard ambient conditions to stabilize the EUT and the environment. The environmental chamber temperature was then decreased to -4°F at a rate that did not exceed 10°F per minute. Once temperature stabilization was reached, the required test environment was maintained for the required interval of four hours. At the conclusion of four hours, environmental chamber temperature was then increased to standard ambient conditions at a rate that did not exceed 10°F per minute.

Summary Findings

The ExpressVote 2.0 met the requirements of the Low Temperature Test without any degradation to structure and/or performance capability.

(The remainder of this page intentionally left blank)

3.5.3 High Temperature

High Temperature testing was performed in accordance with Volume I Section 4.1.2.14 and Volume II Section 4.6.5 of the 2005 VVSG and is equivalent to the procedure of MIL-STD-810D, Method 501.2, Procedure I-Storage. The purpose of this test was to simulate stresses associated with the storage of voting machines and ballot counters with a maximum temperature of 140°F.

The High Temperature test was conducted on the ExpressVote 2.0 (1 unit). For each test, the EUT was placed inside an environmental test chamber and the temperature was adjusted to maintain standard ambient conditions to stabilize the EUT and the environment. The environmental chamber temperature was then increased to 140°F at a rate that did not exceed 10°F per minute. Once temperature stabilization was reached, the required test environment was maintained for the required interval of four hours. At the conclusion of four hours, environmental chamber temperature was then increased to standard ambient conditions at a rate that did not exceed 10°F per minute.

Summary Findings

The ExpressVote 2.0 met the requirements of the High Temperature Test without any degradation to structure and/or performance capability.

(The remainder of this page intentionally left blank)

3.5.4 Humidity

Humidity testing was performed in accordance with Volume I Section 4.1.2.14 and Volume II Section 4.6.6 of the 2005 VVSG and is similar to the procedure of MIL-STD-810D, Method 507.2, Procedure I-Natural Hot-Humid. The purpose of this test was to simulate stresses associated with the storage of voting machines and ballot counters with an uncontrolled temperature and humidity environment during storage.

The Humidity test was conducted on the ExpressVote 2.0 (1 unit). For each test, the EUT was placed inside an environmental test chamber and was subjected to a humidity cycle for the required interval of 240-hours (10-days) in accordance with the 24-hour cycle values as shown in Table 3-5.

Table 3-5 Humidity Test Cycle Values

| Time | Hot-Humid (Cycle 1) | | |
|------|---------------------|----|----|
| | Temperature | | RH |
| | °F | °C | |
| 0000 | 88 | 31 | 88 |
| 0100 | 88 | 31 | 88 |
| 0200 | 88 | 31 | 88 |
| 0300 | 88 | 31 | 88 |
| 0400 | 88 | 31 | 88 |
| 0500 | 88 | 31 | 88 |
| 0600 | 90 | 32 | 85 |
| 0700 | 93 | 34 | 80 |
| 0800 | 96 | 36 | 76 |
| 0900 | 98 | 37 | 73 |
| 1000 | 100 | 38 | 69 |
| 1100 | 102 | 39 | 65 |
| 1200 | 104 | 40 | 62 |
| 1300 | 105 | 41 | 59 |
| 1400 | 105 | 41 | 59 |
| 1500 | 105 | 41 | 59 |
| 1600 | 105 | 41 | 59 |
| 1700 | 102 | 39 | 65 |
| 1800 | 99 | 37 | 69 |
| 1900 | 97 | 36 | 73 |
| 2000 | 94 | 34 | 76 |
| 2100 | 97 | 33 | 85 |
| 2200 | 90 | 32 | 85 |
| 2300 | 89 | 32 | 88 |

Summary Findings

The ExpressVote 2.0 met the requirements of the Humidity test without any degradation to structure and/or performance capability.

3.5.5 Vibration

Vibration testing was performed in accordance with Volume I Section 4.1.2.14 and Volume II Section 4.6.3 of the 2005 VVSG and is equivalent to the procedure of MIL-STD-810D, Method 514.3, Category 1- Basic Transportation, Common Carrier. This test simulated stresses faced during the transport of voting machines and ballot counters between storage locations and polling places.

The Vibration test was conducted on the ExpressVote 2.0. The EUT was secured to an electrodynamics shaker with one control accelerometer affixed to the shaker table. The EUT was subjected to a frequency ranging from 10 to 500 Hz and overall rms levels of 1.04, 0.74, and 0.20 G for durations of 30 minutes in each orthogonal axis.

Summary Findings

The ExpressVote 2.0 met the requirements of the Vibration Test without any degradation to structure and/or performance capability.

(The remainder of this page intentionally left blank)

3.5.6 Bench Handling

Bench Handling testing was performed in accordance with Volume I Section 4.1.2.14 and Volume II Section 4.6.2 of the 2005 VVSG and is equivalent to the procedure of MIL-STD-810D, Method 516.3, Procedure VI. This test simulated impacts faced during maintenance and repair of voting machines and ballot counters.

The Bench Handling test was conducted on one ExpressVote 2.0. The EUT was placed on a standard workbench and each edge of the base was raised to a height of four inches above the surface and allowed to drop freely. This was performed six times per edge, for a total of 24 drops.

Summary Findings

The ExpressVote 2.0 met the requirements of the Bench Handling Test without any degradation to structure and/or performance capability.

(The remainder of this page intentionally left blank)

3.5.7 Electrical Power Disturbance

Electrical Power Disturbance testing was performed in accordance with Volume I Section 4.1.2.5 and Volume II Section 4.8 of the 2005 VVSG. This testing was performed to ensure that the EUT is able to withstand electrical power line disturbances (dips/surges) without disruption of normal operation or loss of data.

The Electrical Power Disturbance test was conducted on the ExpressVote 2.1 (5 units). For each test, the EUT was subjected to the voltage dips and surges detailed in Table 3-6. The power input line was subjected to voltage dips ranging from 30% to more than 95% for periods of 10 milliseconds up to 5 seconds and surges of $\pm 15\%$ for up to 8 hours. Table 3-6 lists power line disturbance dip and surge detail.

Table 3-6. Power Line Disturbances

| Type | Percentage | Duration |
|-------|------------|------------------------------|
| Dip | 30% | 10 ms |
| Dip | 60% | 100 ms and 1 sec |
| Dip | >95% | 5 sec |
| Surge | $\pm 15\%$ | 8 Hours (4 Each Polarity) |

Summary Findings

The ExpressVote 2.1 met the requirements of the Electrical Power Disturbance test without any degradation to structure and/or performance capability.

(The remainder of this page intentionally left blank)

3.5.8 Electrical Fast Transient

Electrical Fast Transient (EFT) testing was performed in accordance with Volume I Section 4.1.2.6 and Volume II Section 4.8 of the 2005 VVSG and RFI 2008-10. This testing was performed to ensure that, should an electrical fast transient event occur on a power line, the EUT would continue to operate without disruption of normal operation or loss of data.

The EFT test was conducted on the ExpressVote 2.1 (5 units). For each test, electrical fast transients of ± 2 kV were applied to external AC power lines and the pulse characteristics are listed in Table 3-7.

Table 3-7. EFT Pulse Characteristics

| Pulse Description | Requirements | Units |
|-----------------------|--------------------|-----------------|
| Pulse Amplitude | $+/-2.0$ | kV peak to peak |
| Pulse Rise Time | $5 \pm 30\%$ | nanoseconds |
| Pulse Width | $50 \pm 30\%$ | nanoseconds |
| Pulse Repetition Rate | 100 | kHz |
| Pulse Shape | Double exponential | -- |
| Burst Duration | 15 | milliseconds |
| Burst Period | 300 | milliseconds |
| Test Duration | 60 | seconds |

Summary Findings

The ExpressVote 2.1 met the requirements of the Electrical Fast Transient Test without any degradation to structure and/or performance capability.

The ExpressVote 2.0 deficiencies were identified and the details of the discrepancies and subsequent resolutions are described in Appendix B – Deficiency Report, NOD 1.

(The remainder of this page intentionally left blank)

3.5.9 Lightning Surge

Lightning Surge testing was performed in accordance with Volume I Section 4.1.2.7 and Volume II Section 4.8 of the 2005 VVSG. This testing was performed to ensure that, should a surge event occur on a power line due to a lightning strike, the EUT would continue to operate without disruption of normal operation or loss of data.

The Lightning Surge test was conducted on: ExpressVote 2.1 (5 units) and DS850 (1 unit). For each test, the power input line was subjected to lightning surge testing at levels of ± 0.5 , ± 1.0 and ± 2.0 kV applied to its AC power line per the surge characteristics listed in Table 3-8.

Table 3-8. Surge Characteristics

| Pulse Description | Test Level | | | Units |
|--------------------------------|--|-----------|-----------|---------------|
| | A | B | C | |
| Pulse Amplitude | ± 0.5 | ± 1.0 | ± 2.0 | kV |
| Pulse Rise Time | $1.2 \pm 30\%$ | | | microseconds |
| Pulse Width | $50 \pm 20\%$ | | | microseconds |
| Pulse Repetition Rate | 1 | | | Per minute |
| Phase Synchronization (Points) | AC Line at zero-crossing of (0°) , (90°) , (180°) and (270°) . | | | Degrees |
| Total Pulse to be Injected | ± 5 | | | At each point |

Summary Findings

The ExpressVote 2.1 and DS850 met the requirements of the Lightning Surge Test without any degradation to structure and/or performance capability.

Note: The DS850 was included in this Lightning Surge Test at the request of the EAC to test the APC Power Saving Back UPS Pro 1500.

(The remainder of this page intentionally left blank)

3.5.10 Electrostatic Disruption

Electrostatic Disruption (ESD) testing was performed in accordance with Volume I Section 4.1.2.8 and Volume II Section 4.8 of the 2005 VVSG and RFI 2010-01. This testing was performed to ensure that should an electrostatic discharge event occur during equipment setup and/or ballot casting, the EUT would continue to operate normally. Momentary interruption is allowed so long as normal operation is resumed without human intervention or loss of data.

The Electrostatic Disruption test was conducted on the ExpressVote 2.1 (5 units). For each test, the EUT was subjected to electrostatic discharges, contact, and air as shown in Table 3-9.

Table 3-9. Electrostatic Discharge Test Levels

| Characteristic | Resistance | | | | Capacitance | | | | Unit | |
|-------------------------------|------------|----|----|-----|----------------|----|-------------------|----|--------|-----------------------------|
| Pulse Wave Shape (RC Network) | 330 | | | | 150 | | | | Ω / pf | |
| Discharge Types | Air Gap | | | | Direct Contact | | Indirect Coupling | | | |
| Test Levels | A | B | C | D | A | B | C | A | B | C |
| | ±2 | ±4 | ±8 | ±15 | ±2 | ±4 | ±8 | ±2 | ±4 | ±8 |
| Number of Discharges | 20 | 20 | 20 | 20 | 20 | 20 | 20 | 20 | 20 | 10 Discharges each polarity |

The EUT was raised approximately 10 cm from the ground using isolated stand-offs. Signal/control test cables were positioned approximately 5 cm (2 in.) above the ground. Discharges were performed at areas typical of those that might be touched during normal operation, including the touch screen, user buttons, cables, connectors, and other points of contact used by the voter or poll worker.

Summary Findings

The ExpressVote 2.1 met the requirements of the Electrostatic Disruption Test without any degradation to structure and/or performance capability.

The ExpressVote 2.0 deficiencies were identified and the details of the discrepancies and subsequent resolutions are described in Appendix B – Deficiency Report, NOD 5, NOD 6, NOD 7, and NOD 8. Upon correction and retest, the EUT met the requirements of the Electrostatic Disruption Test without any degradation to structure and/or performance capability.

(The remainder of this page intentionally left blank)

3.5.11 Electromagnetic Emissions: Radiated and Conducted

Electromagnetic Emissions testing was performed in accordance with Volume I Section 4.1.2.9 and Volume II Section 4.8 of the 2005 VVSG. This testing was performed to ensure that emissions emanating from the EUT do not exceed the limits of 47 CFR Part 15, Subpart B, Class B Limits. Testing was performed at the NTS Huntsville Open Air Test Site 2 (OATS-2) located in Huntsville, AL. The OATS-2 is fully described in reports provided to the Federal Communication Commission (FCC) (FCC Reference 98597) and the site complies with the requirements of ANSI C63.4-2003.

The Electromagnetic Emissions test was conducted on the ExpressVote 2.1 (5 units). For each test, the EUT was scanned during normal operation to determine the levels of radiated emissions the EUT emitted. Table 3-10 list the conducted and radiated emission limits of FCC Part 15, Class B emissions.

Table 3-10. Conducted and Radiated Emissions Requirements

| Conducted Emissions | | | Radiated Emissions | |
|--------------------------|-------------------------|----------|--------------------------|------------------------------------|
| Frequency Range (MHz) | Limits (dB μ V) | | Frequency Range (MHz) | 3 Meter Test Limit (dB μ V) |
| | Quasi-peak ¹ | Average | | |
| 0.15 to 0.50 | 66 to 56 | 56 to 46 | 30 to 88 | 40.0 |
| 0.50 to 5.0 | 56 | 46 | 88 to 216 | 43.5 |
| 5.0 to 30.0 | 60 | 50 | 216 to 960 | 46.0 |
| | | | 960 to 1000 | 54.0 |

Summary Findings

The ExpressVote 2.1 met the requirements of the Electromagnetic Emissions test without any degradation to structure and/or performance capability.

¹Agencies governing the electromagnetic interference (EMI) from commercial products require quasi-peak detection to be used. Even if the emission from a device is over a test limit when measured with peak detection, the device will be considered to pass if the quasi-peak level is below the test limit.

Quasi-peak detection is a form of detection where the result of a quasi-peak measurement depends on the repetition rate of the signal. Signals can be classified into two general categories based upon their repetition rate: narrowband or broadband. A narrowband signal is a signal that can be resolved by the spectrum analyzer. An example of a narrowband signal is a continuous wave (CW) signal. A CW signal is one signal at a fixed frequency. A broadband signal is a signal that cannot be resolved by the spectrum analyzer. An example of a broadband signal is a pulse signal. Peak, quasi-peak, and average detection will yield the same amplitude level for a narrowband signal. A broadband signal will yield a quasi-peak level lower than the peak level. The weighting (accounted for through specific charge and discharge time constants in the quasi-peak detector circuit), is a function of the repetition frequency of the signal being measured. The lower the repetition frequency, the lower the quasi-peak level.

3.5.12 Electromagnetic Susceptibility

Electromagnetic Susceptibility testing was performed in accordance with Volume I Section 4.1.2.10 and Volume II Section 4.8 of the 2005 VVSG. This testing was performed to ensure that the EUT was able to withstand a moderate level of ambient electromagnetic fields without disruption of normal operation or loss of data.

The Electromagnetic Susceptibility test was conducted on the ExpressVote 2.1 (5 units). For each test, the EUT was subjected to ambient electromagnetic fields at 10 V/m with an 80% modulated 1 kHz sine wave over a range of 80 MHz to 1000 MHz, as shown in Table 3-11. Testing was conducted utilizing both horizontally and vertically polarized waves. The limits were measured with a maximum scan rate of 1% of the fundamental frequency and the dwell duration was three seconds.

Table 3-11. Electromagnetic Susceptibility Test Levels

| EN61000-4-3 Radiated Immunity | | | | |
|---|----------|------------|----------------|----------------|
| Frequency (Hz) | Polarity | | Dwell Duration | Angle (Degree) |
| 80 MHz – 1 GHz (80% modulated 1 kHz sine wave) | Vertical | Horizontal | 3 seconds | 0 |
| | | | | 90 |
| | | | | 180 |
| | | | | 270 |

Summary Findings

The ExpressVote 2.1 met the requirements of the Electrostatic Disruption Test without any degradation to structure and/or performance capability.

The ExpressVote 2.0 deficiencies were identified and the details of the discrepancies and subsequent resolutions are described in Appendix B – Deficiency Report, NOD 3. Upon correction and retest, the ExpressVote 2.0 met the requirements of the Electromagnetic Susceptibility Test without any degradation to structure and/or performance capability.

(The remainder of this page intentionally left blank)

3.5.13 Conducted RF Immunity

Conducted RF Immunity testing was performed in accordance with Volume I Section 4.1.2.11.a and Volume II Section 4.8 of the 2005 VVSG. Section 4.1.2.11.b of Volume I was not applicable because the EUT did not have signal/control lines greater than three meters. This testing was performed to ensure that the EUT was able to withstand conducted RF energy onto its power lines without disruption of normal operation or loss of data.

The Conducted RF Immunity test was conducted on the ExpressVote 2.1 (5 units). For each test, the EUT was subjected to conducted RF energy of 10 V_{RMS} applied to its power lines over a frequency range of 150 kHz to 80MHz.

Summary Findings

The ExpressVote 2.1 met the requirements of the Conducted RF Immunity Test without any degradation to structure and/or performance capability.

(The remainder of this page intentionally left blank)

3.5.14 Electrical Supply

Electrical Supply testing was performed in accordance with Volume I Section 4.1.2.4 of the 2005 VVSG including considerations for RFI 2008-02 and RFI 2008-06.

The test was performed to ensure that the EUT would continue to operate a minimum of two hours when power is lost. It was required that the voting system perform a successful shutdown without loss or degradation of the voting and audit data and allow voters to resume voting once the voting system had reverted back to primary power.

The Electrical Supply test was conducted on the ExpressVote 2.1 (5 units). The EUT were then operated as designed for fifteen minutes prior to the removal of the AC input power. Once AC power was interrupted, the EUT was continuously operated for a minimum period of two hours. At the conclusion of two hours, the EUT was powered down. The AC power was restored and the EUT was operated for an additional fifteen minutes.

Summary Findings

The ExpressVote 2.1 met the requirements of the Electrical Supply Test without any degradation to structure and/or performance capability.

(The remainder of this page intentionally left blank)

3.6 System Level Testing

System-level testing examines the ability of proprietary software, hardware, and peripherals in addition to the COTS software, hardware, and peripherals to operate as a complete system. NTS Huntsville utilizes test cases designed to ensure that integrated components function as specified by the manufacturer's documentation and meet the requirements of the VVSG.

3.6.1 Technical Data Package Review

The EVS 5.4.0.0 TDP was reviewed to the 2005 VVSG. This review was performed as part of the testing activities. The TDP review only included the revised and new documents submitted for this testing campaign. The documents were reviewed for accuracy, completeness, and compliance to the 2005 VVSG.

The review results were recorded in a worksheet that provided the pass/fail compliance to each applicable VVSG requirement. The discovered deficiencies were reported to the manufacturer and internally tracked by NTS Huntsville as test exceptions until verified that the applicable documents had been corrected. The manufacturer corrected nonconformance observations and resubmitted the associated documents for review. This process continued until the TDP complied with the applicable TDP standards in the EAC 2005 VVSG.

Summary Findings

There were sixty-three TDP deficiencies discovered during this test campaign. A summary of the TDP issues encountered is provided below:

- Some descriptive information included was inconsistent with descriptions in other TDP documents.
- Some documents included functionality that was not supported in the voting system.
- Some of the individual user guides included information which conflicted with the actual information encountered when verified during the testing process.

All TDP deficiencies were resolved by ES&S prior to completion of testing.

(The remainder of this page intentionally left blank)

3.6.2 Volume and Stress Test

The ExpressVote 2.0 was subjected to a Volume and Stress Test in accordance with the requirements of Section 6.2.3 of Volume II of the VVSG. The purpose of the test was to investigate the system's response to conditions that tend to overload the system's capacity to process, store, and report data. The Volume Test parameters were dependent upon the maximum number of active voting positions and the maximum number of ballot styles that the TDP claims the system can support. Testing was performed by exercising election definitions developed specifically to test for volume and stress (Election Definitions: Elections A, C, D, and E contained in Table 3-12 of this document). Elections B and F were excluded from this campaign based on no changes within the ERM limits from the previously certified EVS 5.2.0.0 system. All vote summary cards were cast and tabulated on the DS200. All totals were verified within ERM against the expected results matrix to verify accuracy and the system's ability to handle the TDP stated limits.

Table 3-12 Volume and Stress

3.6.2 Volume and Stress Test (Continued)

Summary Findings

At the conclusion of the Volume and Stress Test, the ExpressVote 2.0 unit successfully exercised the stated system limits. One ExpressVote 2.0 was used for the duration of Volume and Stress performance testing. One hundred and forty-two vote summary cards were processed without issue upon the completion of the test.

(The remainder of this page intentionally left blank)

3.6.3 System Integration Test

System Integration Testing was performed to test the complete voting system, including all proprietary and COTS software, hardware, and peripherals configured as described in the manufacturer-submitted TDP for the EVS 5.4.0.0. To perform the System Integration Testing, NTS developed specific procedures and test cases designed to test the system as a whole. These procedures demonstrated compliance to Sections 2, 3, 4, 5, and 6 of Volume I of the VVSG.

In order to verify compatibility with the system in scope, ballots were presented across the system and all results verified against the expected results matrix. The created test deck for system integration included hand marked ballots and ADA generated ballots.

The six election definitions exercised during the System Integration Testing are listed below:

- Gen-01 is a basic election held in four precincts, one of which is a split precinct, containing nineteen contests compiled into four ballot styles. Five of the contests are in all four ballot styles. The other fourteen contests are split between at least two of the precincts with a maximum of four different contests spread across the four precincts. This election was designed to functionally test the handling of multiple ballot styles, support for at least two languages, support for common voting variations, and audio support for at least two languages.
- Gen-02 is a basic election held in three precincts. This election contains fifteen contests compiled into three ballot styles. Ten of the contests are in all three ballot styles with the other five split across the three precincts. This election was designed to functionally test the handling of multiple ballot styles, support for ballot rotation, support for two languages, support for complex voting variations, and audio support for multiple languages.
- Gen-03 is a basic election held in two precincts. This election contains eight contests compiled into two ballot styles. Four of the contests are in both ballot styles. The other four contests are split between the two precincts. This election was designed to functionally test the handling of multiple ballot styles, support for at least three languages including a character-based language, support for common voting variations, and audio support for at least three languages and an ADA binary input device.
- Prim-01 is a closed primary election in two precincts (one precinct is a split), containing thirty contests compiled into five ballot styles. Each ballot style contains six contests. This election was designed to functionally test an open primary with multiple ballot styles, support for two languages, and support for common voting variations.
- Prim-02 is a basic election held in two precincts. This election contains thirteen contests compiled into three ballot styles. One contest is in all three ballot styles and all other contests are independent. This election was designed to functionally test the handling of multiple ballot styles, support for Primary presidential delegation nominations, support for two languages, support for complex voting variations, and audio support for multiple languages.
- Prim-03 is a basic election held in two precincts. This election contains ten contests and is compiled into two ballot styles. Two of the contests are in both ballot styles. The other eight contests are split between the two party ballots. This election was designed to functionally test the handling of multiple ballot styles, support for at least three languages including an Ideographic based language, support for common voting variations, and audio support for at least three languages and an ADA binary input device.

Summary Findings

Through System Integration Testing, it was demonstrated that the system performed as documented with all components performing their intended functions.

3.6.4 Data Accuracy

The ExpressVote was subjected to a Data Accuracy Test in accordance with the requirements of Section 4.7.1.1 of the Volume II of the VVSG. Per the 4.7.1.1, data accuracy is defined in terms of ballot position error rate. This rate applies to the voting functions and supporting equipment that capture, record, store, consolidate, and report the selections (or absence thereof) made by the voter for each ballot position. To meet the requirements of this test, the voting system must be subjected to the casting of a large number of ballots to verify vote recording accuracy. The accuracy test utilized a combination of hand marked (70%) and pre-marked (30%) ballots to achieve accuracy rate greater than 1,549,703 correct ballot positions.

Summary Findings

The ExpressVote successfully met the requirements of the Data Accuracy Test by scanning and processing a minimum of 1,549,703 ballot positions.

(The remainder of this page intentionally left blank)

3.6.5 Physical Configuration Audit (PCA)

A Physical Configuration Audit (PCA) of the EVS 5.4.0.0 voting system was performed as part of the testing activities in accordance with Volume II, Section 6.6 of Volume II of the EAC 2005 VVSG. The PCA compares the voting system components submitted for certification with the vendor's technical documentation and confirms that the documentation submitted meets the requirements of the Guidelines. The PCA included the following activities:

- Establishing a configuration baseline of software and hardware to be tested; confirm whether manufacturer's documentation is sufficient for the user to install, validate, operate, and maintain the voting system;
- Verifying software conforms to the manufacturer's specifications; inspect all records of manufacturer's release control system; if changes have been made to the baseline version, verify manufacturer's engineering and test data are for the software version submitted for certification;
- Reviewing drawings, specifications, technical data, and test data associated with system hardware, and to establish system baseline;
- Reviewing manufacturer's documents of user acceptance test procedures and data against system's functional specifications; resolve any discrepancy or inadequacy in manufacturer's plan or data prior to beginning system integration functional and performance tests;
- Subsequent changes to baseline software configuration made during testing, as well as system hardware changes that may produce a change in software operation are subject to re-examination.

Summary Findings

A PCA was performed to baseline the system's hardware and software components that were used during the test campaign. One discrepancy was discovered during PCA. The details of the discrepancy and subsequent resolution are described in Appendix B – Deficiency Report, NOD 4. Upon correction and re-examination, the EUT met the requirements of the PCA without any degradation to structure and/or performance capability.

(The remainder of this page intentionally left blank)

3.6.6 Functional Configuration Audit (FCA)

A Functional Configuration Audit of the EVS 5.4.0.0 was performed in accordance with Section 6.7 of Volume II of the VVSG. The purpose of the FCA was to verify that the submitted modifications listed in section 2.2.1 performed as documented in the manufacturer supplied technical documentation and to validate that the modifications met the requirements of the EAC 2005 VVSG.

Summary Findings

Any deficiencies were reported to and resolved by ES&S. Each deficiency was then re-evaluated by NTS and found to be in compliance. A summary of the deficiencies encountered are provided below:

- Performed verification of the ExpressVote System's Administrator 'Menu/Set Time Zone/Date/Time Menu' with election USB flash drive inserted into the ExpressVote running as a Tabulator, per the TDP and the VVSG Requirements. The 'Date/Time' was changed, then the ExpressVote was rebooted, after rebooting it was identified that the change to the 'Date/Time' was not saved properly. Upon installing the applicable firmware update, the test was performed again, for which the 'Date/Time' was successfully saved, as expected.
- Performed verification of the ExpressVote System's Administrator/Override 'Authorization Boxes Menu' with Election USB flash drive inserted into the ExpressVote running as a Tabulator, per the TDP and the VVSG Requirements. During testing the 'override authorization boxes' failed to function properly. Upon installing the applicable firmware update, the test was performed again, for which the 'Authorization Boxes Menu' functioned properly. Note: Use the Override Authorization Boxes to determine whether the ExpressVote overrides the following card handling options specified in the Electionware settings: Always reject vote summary cards with blank initials boxes and Always return vote summary cards with a marked review box.
- Performed verification of the ExpressVote System's 'Reset AutoCast Count on the System Administration Menu', per the TDP and the VVSG Requirements. During testing, the AutoCast counter failed to count properly. Upon installing the applicable firmware update, the test was performed again, for which the AutoCast counter successfully counted properly. Note: AutoCAST® references the action of rear ejecting a marked vote summary card into the secure card container instead of returning the vote summary card via the front card slot. AutoCAST® vote summary cards must be scanned for tabulation on a compatible ES&S tabulator.

(The remainder of this page intentionally left blank)

3.6.7 Security Testing

The EVS 5.4.0.0 security tests were performed on both the ExpressVote 2.0 and the ExpressVote 2.1.

EMS components were subjected to a Security Content Automation Protocol (SCAP), which consists of security review and vulnerability assessment. The review was conducted to verify that the operating environment (Windows Server 2008 R2 and Windows 7) was configured to match industry recognized security protocol and that no vulnerabilities were present. The ES&S TDP was utilized during this portion of testing to ensure the proper configuration of the operating environment.

In addition, Security Testing as mentioned in Section 3.4 of this test report, was performed to analyze the implementation of the RSA encryption library. This analysis was executed by using a combination of source code review and a dynamic analysis, which is the testing and evaluation of a program by executing data in real-time. The objective is to find errors in a program while it is running, rather than by repeatedly examining the code offline.

Summary Findings

One deficiency was discovered during security testing. It was determined that the Windows patches were not current. The details of the discrepancy and subsequent resolution are described in Appendix B – Deficiency Report, NOD 10. ES&S corrected this and upon retest, the EMS components were found to be in compliance with the security requirements of the EAC 2005 VVSG.

(The remainder of this page intentionally left blank)

3.7 Source Code Review

Prior to submitting EVS 5.4.0.0, ES&S submitted EVS 5.2.0.0 for source code review. This source code review was performed in accordance with the 2005 VVSG and EAC Testing and Certification Program Manual, Version 2.0. All code modified or added subsequent to the EVS 5.2.0.0 source code reviews was reviewed as part of the 5.4.0.0 test campaign.

Summary Findings

A total of 404,894 lines of code were reviewed for the EVS 5.4.0.0 test campaign. 708 source code deficiencies were discovered during testing. All identified source code deficiencies were resolved prior to the conclusion of the source code review process. The deficiencies are summarized in Table 3-13.

Table 3-13. Source Code Review Deficiencies

| System Name | Deficiency (Type) | Deficiency (QTY) |
|-----------------|-----------------------------------|------------------|
| AutoMARK | Header File References | 4 |
| | Non Initialized Variables | 2 |

4.0 RECOMMENDATION FOR CERTIFICATION

NTS Huntsville performed conformance testing on the Election Systems & Software Voting System 5.4.0.0 to the EAC 2005 VVSG. Additional testing on the ExpressVote was requested by the EAC to prove ES&S' ability to reliably manufacture these (See Table C-1. As-Run Test Plan Changes). NTS determined that the modifications met the requirements of the EAC 2005 VVSG and the manufacturer's technical documentation. Based on test findings, NTS Huntsville recommends the EAC grant the EVS 5.4.0.0 certification to the EAC 2005 VVSG. This report is valid only for the equipment identified in Section 2.0 of this report. Due to the varying requirements of individual jurisdictions, it is recommended, by the EAC 2005 VVSG, that local jurisdictions perform acceptance tests on all systems prior to implementation within their jurisdiction.

(The remainder of this page intentionally left blank)

APPENDIX A. – ADDITIONAL FINDINGS

A.1 ADDITIONAL FINDINGS REPORT

The following tests were performed by NTS Huntsville at the request of the manufacturer. These modifications or additions represent functionality or tools that are outside the scope of the certification.

A.1.2 Election Support Software and Hardware

The following software and hardware components were used during certification tests to support the operations of the EMS and ExpressVote 2.0:

- ExpressLink – ExpressLink is a Windows PC application that can run in either a standalone mode, or in a monitor mode, where the application monitors requests from a voter registration (VR) system over a shared network folder. The application imports an election definition from Electionware, accepts requests to print a voter's ExpressVote activation card, determines the voter's ballot style and then prints the activation card on the ExpressVote Activation Card Printer.
- ExpressVote Activation Card Printer – The ExpressVote Activation Card Printer is a small, thermal, on demand printer used to print the ballot activation code on the ExpressVote activation card.
- Electionware Toolbox – Electionware Toolbox is a set of utilities that can be integrated into the Electionware EMS to enhance the software usability experience and streamline various processes. These add-on utilities include Test Deck and Text-to-Speech.
- Ballot Online ExpressPass – Ballot Online ExpressPass is an optional system that allows a user to access their ballot online and make sample ballot selections on any device connected to the Internet. When finished, the output from this system is the ExpressPass – a selection summary with scannable QR code that the user can either print or save in an electronic format on their mobile device. The voter operates the ExpressVote to scan, review and validate vote selections. The vote summary card may then be submitted for tabulation on an ES&S tabulator: ExpressVote Tabulator, DS200 or DS850.

NTS Huntsville performed limited testing as requested by the manufacturer. Table A-1 outlines the requested testing.

Table A-1. Manufacturer Requested Testing Outside of Certification

| Component | Version | Requested Testing |
|--|---------|--|
| ExpressLink | 1.2.0.0 | 2005 VVSG Source code Compliance, Functional Integration Test |
| ExpressVote Activation Card Printer | N/A | Functional Integration Test |
| Electionware Toolbox | 2.4.0.0 | Functional Integration Test |
| Ballot Online ExpressPass | N/A | Functional Integration Test |

A.1.3 Summary Findings

The limited testing by NTS determined that the components listed in Table A-1 functioned as described and did not introduce any errors into the certified system. In addition, the ExpressLink software was found to comply with the source code requirements of the 2005 VVSG.

APPENDIX B. – DEFICIENCY REPORT

B.1 DEFICIENCY REPORT

Table B-1 describes the functional deficiency and resolution discovered during the EVS 5.4.0.0 test campaign.

Table B-1. Functional Deficiency Report

| NTS NOD ID | EAC VRT ID ² | Test/Requirement | Deficiency Summary | Resolutions |
|------------|-------------------------|---|--|---|
| NOD 1 | 177 | Electrical Fast Transient/ Vol. I Sec 4.1.2.6 | During the -2 kV Line to Ground cycle the printer on the ExpressVote 2.0 Kiosk stopped responding. | ES&S added a ferrite to the printer ribbon cable. |
| NOD 2 | 174 | Acoustical/ Vol. I Sec 3.2.2.2.c.vi | The ExpressVote 2.0 could only reach a maximum of 81 dB SPL. Volume 1 Section 3.2.2.2.c.vi requires the maximum volume to be 100 dB SPL. | ES&S made a software change to correct the deficiency. |
| NOD 3 | 176 | Electromagnetic Susceptibility/ Vol. I Sec 4.1.2.10 | The ExpressVote 2.0 was found to be Susceptible at 110 MHz, Vertical Antenna Polarization with the EUT oriented at 270 degrees. | ES&S added ferrites to USB lines and power line. |
| NOD 4 | 181 | PCA/ Vol. II Sec 6.6 | Two of the seven ExpressVote 2.0 units examined during PCA did not match the manufacturer's hardware specifications (missing ferrites). | The missing ferrites were added to the EUT. |
| NOD 5 | 182 | Electrostatic Disruption/ Vol. I Sec 4.1.2.8 | When a -8 kV Contact discharge applied to On/Off door keyhole, ExpressVote 2.0 displayed a System Failure error screen. | Applied copper tape to failure areas and replaced power cord. |
| NOD 6 | 185 | Electrostatic Disruption/ Vol. I Sec 4.1.2.8 | The ExpressVote 2.0 Rolling Kiosk external printer failed when 8 kV Contact discharge is applied to 'Top of Stand' test point. | Replaced BOL scanner and Innodisk. |

² The EAC VRT ID numbers may not be sequential. The deficiency tracking system (VRT) that is utilized by the EAC creates unique ID numbers based on overall entries within the database and not within individual projects.

| NTS NOD ID | EAC VRT ID ³ | Test/Requirement | Deficiency Summary | Resolutions |
|------------|-------------------------|---|---|---|
| NOD 7 | 183 | Electrostatic Disruption/ Vol. I Sec 4.1.2.8 | During Post-Op, tester discovered that the BOL scanner was non-functional. | Removed ballot latch spacers. Added copper tape and mesh gaskets to ballot latch assembly. |
| NOD 8 | 184 | Electrostatic Disruption/ Vol. I Sec 4.1.2.8 | During the test, the EUT suffered a disruption of normal operation, when +8 kV was applied by ESD gun to the bottom of the ballot insertion slot. | No modification was made. Testing was halted. ExpressVote 2.0 was ultimately removed from certification and replaced with ExpressVote 2.1. |
| NOD 9 | N/A | Electrostatic Disruption/ Vol. I Sec 4.1.2.8 | During Post-op, the Zero Totals report could not be generated. In accordance with TDP recommendation, the only option was to reboot the EUT. Following reboot of the EUT, the Zero Totals report could now be generated. This occurrence could not be replicated and was therefore, classified as an anomaly. | Recommended to customer that, since the machine required human intervention to function properly after the ESD test, the machine should undergo ESD and post operational status check again to see if the anomaly repeated. Unit underwent ESD testing again on 10/24/16. After the ESD test and during the post operational status check the anomaly was not repeated. |
| NOD 10 | N/A | Testing Interfaces of System Components/Vol. II Sec 6.3 and Security Testing/ Vol. II 6.4 | Voting System that use public telecommunications networks may become vulnerable, by virtue of their system components, to external threats to the accuracy and integrity of vote recording, vote counting and vote consolidation and reporting process. Therefore, vendors of such systems shall document how they plan to monitor and respond to known threats to which their voting systems are vulnerable. | The critical windows updates were applied. Security testing was performed and found to be in compliance. |

³ The EAC VRT ID numbers may not be sequential. The deficiency tracking system (VRT) that is utilized by the EAC creates unique ID numbers based on overall entries within the database and not within individual projects.

| REQUIREMENTS: 2005 VVSG Volume I Section 4.1.2.8 Vote scanning and counting equipment for paper-based systems, and all DRE equipment, shall be able to withstand ± 15 kV air discharge and ± 8 kV contact discharge without damage or loss of data. The equipment may reset or have momentary interruption so long as normal operation is resumed without human intervention or loss of data. Loss of data means votes that have been completed and confirmed to the voter. | | | | | |
| DESCRIPTION OF DEVIATION: During the test the EUT suffered a disruption of normal operation, when +8kV was applied by ESD gun to the bottom of the ballot insertion slot. The failure was annotated in the Engineering Logbook and the NTS Project Lead was notified. The EUT was power cycled, subjected to the same test where the disruption of normal operation was duplicated, when the printer once again failed to continue normal operation. | | | | | |
| DISPOSITION • COMMENTS • RECOMMENDATIONS: The results were documented and the customer informed of the deficiency. The test was halted and the customer performed a root cause analysis. Additional detailed information regarding the root cause analysis shall be provided by the customer. ExpressVote 2.0 was ultimately removed from certification and replaced with ExpressVote 2.1. | REQUIREMENTS: 2005 VVSG Volume I Section 4.1.2.8 Vote scanning and counting equipment for paper-based systems, and all DRE equipment, shall be able to withstand ± 15 kV air discharge and ± 8 kV contact discharge without damage or loss of data. The equipment may reset or have momentary interruption so long as normal operation is resumed without human intervention or loss of data. Loss of data means votes that have been completed and confirmed to the voter. | | | | | |
| DESCRIPTION OF DEVIATION: After completing the Electrostatic Discharge test at the Longmont facility, the unit underwent a post operational status check/election, to verify functionality. When tester attempted to print a Zero Totals report from the unit's attached printer, the report would not generate. After troubleshooting (per the customer's TDP), the only option was to reboot the machine (human intervention). Once the machine rebooted, it functioned properly. | | | | | |
| DISPOSITION • COMMENTS • RECOMMENDATIONS: Recommended to customer that, since the machine required human intervention to function properly after the ESD test, the machine should undergo ESD and post operational status check, again, to see if the anomaly repeated. Unit underwent ESD testing, again, on 10/14/2016. After the ESD test, and during the post operational status check, the anomaly was not repeated. Rev-1: Updated Part No. to include hardware version. APPENDIX C. – AS-RUN TEST PLAN

C.1 AS-RUN TEST PLAN

Table C-1 details the changes made to the test plan during the course of testing. For a complete description, see NTS Test Plan PR032474-01 Rev C.

Table C-1. As-Run Test Plan Changes

| Test Plan Section | Description of Change | Justification |
|-------------------|--|--|
| 6.3 | Additional EMI testing of 5 ExpressVote units to ascertain manufacturability of the ExpressVote 2.1. | Additional testing required by the EAC |
| 6.3.7 | RSA Crypto testing | Additional testing required by the EAC |

(The remainder of this page intentionally left blank)

APPENDIX D. – TECHNICAL DATA PACKAGE

D.1 EVS 5.4.0.0 TECHNICAL DATA PACKAGE

The documents listed in Table D-1 comprise the EVS 5.4.0.0 TDP.

APPENDIX E. – DETAILS OF SUBMITTED MODIFICATIONS

E.1 SUBMITTED MODIFICATIONS

Table E.1. Submitted Modification

| Change ID | System Component | Modification | 2005 VVSG Requirement | |
|-----------|------------------|---|--|----------|
| | | | Volume 1 | Volume 2 |
| BUG30689 | DS200 | Changed DS200 implementation layer to use the candidate type flag sent from Electionware to not reject or query marginal marks for oval locations for text-only contests | 2.3.3.2 e, f, g, and h 3.1.2 a, b, c, d, and e 4.1.5.1 d i, iii and iv 4.1.5.2 b | 6.7 |
| ENH23027 | DS200 | Capture and display the write-in text on the report tape | N/A | 6.7 |
| ENH30966 | DS200 | Added new log entries to document actions within the new write in report features: Entered View Write-Ins Viewed image X of X Exited View Write-Ins | N/A | 6.7 |
| BUG31901 | DS200 | For text only candidates the results on the zero and results reports was removed | 6.7 | 6.7 |
| BUG31953 | DS200 | Resolved an issue whereby a missing column mark on the trailing edge of the ballot can cause a false positive for enhanced write-ins | N/A | 6.7 |
| BUG32093 | DS200 | Correct typo in wording of undervote query screen | 2.3.3.2 e, f, g, and h 3.1.2 a, b, c, d, and e 4.1.5.1 d i, iii, and iv | 6.7 |
| BUG32662 | DS200 | Resolved issue with results report printing after reopening polls on a different machine when the time is set earlier than the report generated from the previous machine | 2.1.7.1.b; 2.1.8 d & e 2.2.3 b & c 2.2.4 a, b, c, d, e, g, & h 2.2.5 a, b, c, d, e, g ,h, & i 2.3.1.2 d & e; 5.4.2 a, b, & c | 6.7 |
| BUG32784 | DS200 | Resolve issue where the user can inadvertently be allowed to clear ballot data when recovering from a hardware failure during the close process | N/A | 6.7 |
| Multiple | DS200 | Implement write-in review report | N/A | 6.7 |
| ENH31085 | DS200 | Implement use of Electionware Configure flag indicating all ballots are to be stamped | 4.1.5.1 d ii | 6.7 |

E.1 SUBMITTED MODIFICATIONS (CONTINUED)

Table E.1. Submitted Modification (Continued)

| Change ID | System Component | Modification | 2005 VVSG Requirement | |
|-----------|------------------|---|---|----------|
| | | | Volume 1 | Volume 2 |
| ENH31091 | DS200 | Update Welcome screen graphic to simplify wording, provide a clearer insertion image, and account for standard ballots and ExpressVote card | N/A | 6.7 |
| ENH31092 | DS200 | Updated splash screens to new branding style | 4.3.4.2 f; 7.4.1 a, b, c, d, &e | 6.7 |
| ENH31205 | DS200 | Updated DS200 Admin screen to remove old product name | 2.1.4 j; 4.3.4.1 b, c, & d; 4.3.4.2 a, b, & c | 6.7 |
| ENH31450 | DS200 | Design change to generate a single CVR for an ExpressVote card from a multi-page election | N/A | 6.7 |
| ENH31500 | DS200 | Added the Diagnostic Ballot View functionality to allow the scanned images to be viewed on the screen in diagnostic mode. | 2.1.4 j; 4.3.4.1 b, c, & d; 4.3.4.2 a, b, & c | 6.7 |
| ENH31507 | DS200 | Implement Diagnostic Ballot Viewer's File Export feature to allow the images to be exported to the election media. | 2.1.4 j; 4.3.4.1 b, c, & d; 4.3.4.2 a, b, & c | 6.7 |
| Multiple | DS200 | Implement Judge's Initial/Review Box feature to reject ballot based on various settings from Electionware | N/A | 6.7 |
| ENH32217 | DS200 | Remove support for EOL or non-recommended USB media | N/A | 6.7 |
| ENH32256 | DS200 | Add vote session ID to write-in image viewer | N/A | 6.7 |
| ENH32258 | DS200 | Have ExpressVote images display first in Write-in review viewer | N/A | 6.7 |

E.1 SUBMITTED MODIFICATIONS (CONTINUED)

Table E.1. Submitted Modification (Continued)

| Change ID | System Component | Modification | 2005 VVSG Requirement | |
|-----------|------------------|--|--|----------|
| | | | Volume 1 | Volume 2 |
| BUG33020 | DS200 | Increased write-in capacity. | 2.3.1.2 f; 4.1.5.1 b ii; 4.1.6.1 a i, ii, iii, & iv | 6.7 |
| BUG35030 | DS200 | LibCoNG Sync for DS200 | 2.3.1.2 f; 4.1.5.1 b ii; 4.1.6.1 a i, ii, iii, & iv | 6.7 |
| BUG31543 | DS850 | Minor wording change on bin report for unsaved batch | 2.3.1.2 f; 4.1.5.1 b ii; 4.1.6.1 a i, ii, iii, & iv | 6.7 |
| BUG31708 | DS850 | Change to allow proper viewing of ExpressVote card images in Electionware Produce | 2.1.7.1 d; 2.1.8 b, c, & e; 2.3; 4.1.5.2 c | 6.7 |
| Multiple | DS850 | Implement Judge's Initial/Review Box feature to reject ballot based on settings from Electionware | 2.1.10; 2.1.7.1 b | 6.7 |
| ENH26847 | DS850 | Add additional improvements to IMR to reduce the number of ballots rejected due to skew | 5.3 a | 6.7 |
| ENH31183 | DS850 | Improve Results generation times by performing a data summary for each batch after each batch is saved instead of processing all ballots to generate results | 2.1.7.1 d; 2.1.8 b, c, & e; 2.3; 4.1.5.2 c | 6.7 |
| ENH31184 | DS850 | Improve Export Results performance by packaging each batch at Save time instead of packaging all data at export time | 5.4.2 c | 6.7 |
| ENH31759 | DS850 | If the image retention settings are changed within the election, this regenerates the batch-level data packages to reflect those changes | N/A | 6.7 |
| ENH31789 | DS850 | Integrate common changes needed to support generation of a single CVR for ExpressVote cards in multi-page elections | N/A | 6.7 |
| ENH31918 | DS850 | Report changes needed to account for changes to generate a single CVR for and ExpressVote card in a multi-page election | 2.1.7.1 d; 2.1.7.2; 4.1.5.1 b i & c; 4.1.5.2 b & e | 6.7 |
| ENH32218 | DS850 | Removed support for uncertified USB sticks | 2.3.1.2 f; 4.1.5.1 b ii; 4.1.6.1 a i, ii, iii, & iv | 6.7 |
| ENH32266 | DS850 | Updated startup and shutdown screens to reflect current color scheme and branding | 2.1.7.1 d; 2.1.8 b, c, & e; 2.3; 4.1.5.2 c | 6.7 |
| ENH32486 | DS850 | Updated name of middle bin in log entries to be consistent with overall naming conventions | 2.1.10; 2.1.7.1 b | 6.7 |
| ENH31647 | AutoMARK | Provided a configurable option for users to set voting targets to either checkboxes or ovals | 3.2.5 | 6.7 |

E.1 SUBMITTED MODIFICATIONS (CONTINUED)

Table E.1. Submitted Modification (Continued)

| Change ID | System Component | Modification | 2005 VVSG Requirement | |
|-----------|---------------------------------|--|-----------------------------|----------|
| | | | Volume 1 | Volume 2 |
| BUG30642 | Electionware- Accessible Ballot | Made changes to refresh the Navigator lists more quickly | 2.1.6; 2.2.1.2; 3.1.4 | 6.7 |
| BUG31629 | Electionware- Accessible Ballot | Incorrect name for Cantonese Chinese causes problems when importing script updates | 3.1.3; 3.2.7 | 6.7 |
| ENH31595 | Electionware- Accessible Ballot | Support both Oval and Checkmark images on AutoMARK for the voting session based on customer preference | 2.3.3.3 b & d | 6.7 |
| BUG30848 | Electionware- Acquire | Optimized the loading of DS200 Results sticks with large volumes by removing the additional ballot image zip file parsing | N/A | 6.7 |
| ENH32084 | Electionware- Acquire | The Icon for the Master Media entry in the Navigator will update based on the Master Media status | N/A | 6.7 |
| BUG31254 | Electionware- Capture | Clicking the Contest Language Tabs will focus on the selected language | N/A | 6.7 |
| BUG32131 | Electionware- Capture | Alternate ID fields are now being carried forward for imported Questions | 2.2.1.2 b & e | 6.7 |
| BUG32308 | Electionware- Capture | If a user attempts to generate ballot styles with a contest with no candidates in the election, Electionware will now show an error instead of a warning | 2.2.1.1 a, bii 2.2.2 a | 6.7 |
| BUG32802 | Electionware- Capture | If a user imported elections into Electionware, the <NUM> variable was not showing correctly in Paper Ballot. This has been corrected so that this variable (and others) will work correctly | 2.2.1.2 e | 6.7 |
| ENH31713 | Electionware- Capture | The Hindi language cannot be added to the election through an import if the AutoMARK has been selected as a piece of equipment used in the election | 2.2.1.3 a 3.1.3 3.2.7 | 6.7 |
| ENH31976 | Electionware- Capture | Corrected an issue where ERM couldn't handle logical ballot style IDS with more than seven digits by reducing the ID size limit to 7 digits | 2.1.6 | 6.7 |
| Multiple | Electionware- Configure | Implement Judge's Initial/Review Box feature to reject ballot based on settings from Electionware | 4.1.4.2 a.i | 6.7 |

E.1 SUBMITTED MODIFICATIONS (CONTINUED)

Table E.1. Submitted Modification (Continued)

| Change ID | System Component | Modification | 2005 VVSG Requirement | |
|-----------|------------------------------|---|-------------------------------|----------|
| | | | Volume 1 | Volume 2 |
| ENH29022 | Electionware-Configure | The module name has been changed from Configure Equipment to Configure | N/A | 6.7 |
| ENH31360 | Electionware-Configure | Automatic Printing of the Write-in Entry report can now be set in Configure for the DS200 | 2.4.3 c | 6.7 |
| ENH31362 | Electionware-Configure | Include Write-In Review Report setting will appear on the DS200 Settings Report | N/A | 6.7 |
| ENH31536 | Electionware-Configure | The option to Stamp All ballots has been added to the DS200 settings screen. Additionally, the stamping and diverting functions have been separated and the screen has been reorganized to allow for the setting of one, the other, or both | 4.1.5.1 b, d | 6.7 |
| ENH31538 | Electionware-Configure | The DS200 Settings Report will now show the Stamp All and Divert settings | N/A | 6.7 |
| ENH31539 | Electionware-Configure | If either Stamp or Divert is checked, and no criteria are also checked, an alert will show | N/A | 6.7 |
| ENH31591 | Electionware-Configure | The Vote Target selection for the AutoMARK can now be set from Configure | 2.3.3.3 b & d | 6.7 |
| ENH31592 | Electionware-Configure | The AutoMARK settings report will now show the selected Vote Target setting | N/A | 6.7 |
| BUG31528 | Electionware-Element Library | Add font size specification for all items in translation script for database | 2.2.1.2 c, 3.1.5 d, 3.2.2.1 b | 6.7 |
| BUG31666 | Electionware-Element Library | Add new AutoMARK system prompts to script | 2.2.1.3 a, 3.1.3, 3.2.7 | 6.7 |
| BUG32535 | Electionware-Element Library | Use new image on DS200 when screen definition is changed | N/A | 6.7 |
| BUG32748 | Electionware-Element Library | Modify wording for two AutoMARK prompts | 2.2.1.3 a, 3.1.3, 3.2.7 | 6.7 |
| Multiple | Electionware-Element Library | Provide navigation buttons for voter in Hindi language | 2.2.1.3 a, 3.1.3, 3.2.7 | 6.7 |
| ENH31127 | Electionware-Element Library | Added system prompts to support new functional Judges initials requirements | 2.2.1.3 a, 3.1.3, 3.2.7 | 6.7 |

E.1 SUBMITTED MODIFICATIONS (CONTINUED)

Table E.1. Submitted Modification (Continued)

| Change ID | System Component | Modification | 2005 VVSG Requirement | |
|-----------|------------------------|--|-----------------------|----------|
| | | | Volume 1 | Volume 2 |
| ENH32691 | Electionware-Framework | New User Guide PDFs, Web Help Files, and Quick Help files have been created for Electionware 4.8.0.0 and added to the system to be accessible by users | N/A | 6.7 |
| BUG32143 | Electionware-Home | Make sure the Customer Portal link is correct | N/A | 6.7 |
| BUG31726 | Electionware-Package | Ensure the ExpressVote icon is properly appearing in the toolbar | N/A | 6.7 |
| BUG31734 | Electionware-Package | AutoMARK status is reported in Media Not Created Report | N/A | 6.7 |
| BUG31969 | Electionware-Package | Writeable area coordinates to remain as decimal values when being packaged | N/A | 6.7 |
| BUG32031 | Electionware-Package | Issue when generating Pollbook export | N/A | 6.7 |
| BUG32056 | Electionware-Package | Received error when resetting media | N/A | 6.7 |
| BUG32060 | Electionware-Package | Ensure DS200 sticks are properly formatting before burning | N/A | 6.7 |
| BUG32108 | Electionware-Package | Ensure ExpressVote cards with a Marked Review box are being rejected when set to reject in Electionware | 4.1.4.2 a.i | 6.7 |
| BUG32785 | Electionware-Package | Warn user before burning ExpressVote Tabulator media that the EQC has not been created | N/A | 6.7 |
| BUG32581 | Electionware-Package | Ellipse incomplete in Package > Tools menu | N/A | 6.7 |
| Multiple | Electionware-Package | Implement Judge's Initial/Review Box feature to reject ballot based on settings from Electionware | 4.1.4.2 a.i | 6.7 |
| ENH31540 | Electionware-Package | Pass stamp and diverter options to DS200 for the stamp all ballots option | 4.1.5.1 b, d | 6.7 |
| ENH31562 | Electionware-Package | Package the ExpressVote card font sizes with the DS200 | N/A | 6.7 |
| ENH31594 | Electionware-Package | Package the Oval/Checkmark options to the AutoMARK | 2.3.3.3 b & d | 6.7 |
| ENH32190 | Electionware-Package | Warn user when re-burning media, that if it was input into Acquire, all Acquire information will be erased | N/A | 6.7 |

E.1 SUBMITTED MODIFICATIONS (CONTINUED)

Table E.1. Submitted Modification (Continued)

| Change ID | System Component | Modification | 2005 VVSG Requirement | |
|-----------|---------------------------|---|-------------------------|----------|
| | | | Volume 1 | Volume 2 |
| ENH32597 | Electionware-Package | Warn user if they are re-creating the same poll when burning media | N/A | 6.7 |
| BUG31258 | Electionware-Paper Ballot | Paper Ballot ensures that users can only have one styling method for each response (content-formatted or style-sheet) | 2.2.1.2; 3.1.4 | 6.7 |
| BUG31477 | Electionware-Paper Ballot | Corrected non-panel Content line placement when paneled content lines are included in style sheets along with Vertically Center Content checkbox | 2.2.1.2 a, b | 6.7 |
| BUG31611 | Electionware-Paper Ballot | Paper Ballot allows a user to delete a Panel with Content lines included. Once a Panel is deleted, the Content line will not appear on the ballot | 2.2.1.2 a, b | 6.7 |
| BUG31722 | Electionware-Paper Ballot | Graphics files load consistently from a template | 2.2.1.2 a, b, e | 6.7 |
| BUG31725 | Electionware-Paper Ballot | Flow Candidate option now prevents contests from floating from one page to the next page | 2.2.1.2 a, b | 6.7 |
| BUG32009 | Electionware-Paper Ballot | Created validation that each Question Response has at least one "Default" language Content item for Accessible Ballot | N/A | 6.7 |
| Multiple | Electionware-Paper Ballot | Implement Judge's Initial/Review Box feature to reject ballot based on settings from Electionware | 4.1.4.2 a.i | 6.7 |
| ENH31218 | Electionware-Paper Ballot | Hindi language enabled for EVS5400 | 2.2.1.3 a, 3.1.3, 3.2.7 | 6.7 |
| ENH31478 | Electionware-Paper Ballot | Removed Gutters since new measurements for Panels (inches, auto-height) were added. Instead of Gutters, users can use Panel margins for safer spacing | 2.2.1.2 a, b | 6.7 |
| BUG31643 | Electionware-Produce | Handle image rotation | N/A | 6.7 |
| BUG32505 | Electionware-Produce | Corrected a situation where the printing of a ballot facsimile could cause an error | N/A | 6.7 |
| BUG32508 | Electionware-Produce | The file type for CVR export now defaults to .xls for enhanced usability | 2.1.6; 2.1.7.2; 4.1.7.2 | 6.7 |
| BUG32590 | Electionware-Produce | Exporting ballot images for a large number of districts causes a failure; user should be advised of the limitations | N/A | 6.7 |

E.1 SUBMITTED MODIFICATIONS (CONTINUED)

Table E.1. Submitted Modification (Continued)

| Change ID | System Component | Modification | 2005 VVSG Requirement | |
|-----------|----------------------|---|--|----------|
| | | | Volume 1 | Volume 2 |
| BUG32609 | Electionware-Produce | The issue was the Results XML export file created by Electionware was not populating the total ballots cast attribute correctly in the "Jurisdiction" and "Election" elements. These fields incorrectly contained zeroes. The fix is to correctly populate the total ballots cast attribute in these two elements of the Results XML export file. The count that was incorrect was the total ballots cast attribute in the "Jurisdiction" and "Election" elements of the Results XML export file. The VSTL created a test case to verify the issue was resolved. | N/A | 6.7 |
| ENH32264 | Electionware-Produce | Updated the copyright for reports to show the current year | 2.1.6; 2.1.7.2; 4.1.7.2 | 6.7 |
| BUG31082 | ERM | Corrected a situation where the ERM XML Results file reported Precincts Counted incorrectly | N/A | 6.7 |
| BUG31099 | ERM | Corrected user inability to select "Update Precinct counted" checkbox when ERM is configured with only one reporting group | 2.4.4 a, b, & c; 2.4.3.b & e; 4.1.7.2 a, b, & c; 5.4.4 | 6.7 |
| BUG31469 | ERM | If no backup of the results database is available, the election results media would need to be re-read to collect all results from the various voting devices. Corrected loss of ERM results when converting prior ERM results file format to current ERM results file format | N/A | 6.7 |
| BUG32429 | ERM | Disabled user option to "Exclude Absentee Precincts". Option is no longer supported | 2.4.4 a, b, & c; 2.4.3.b & e; 4.1.7.2 a, b, & c; 5.4.4 | 6.7 |
| ENH31149 | ERM | Added a check box, "Skip Precincts with 0 Ballots Cast", on the "Select Current Group to be Updated" screen, allowing the user to not process (skip) precincts with zero votes when uploading tabulator results | N/A | 6.7 |

E.1 SUBMITTED MODIFICATIONS (CONTINUED)

Table E.1. Submitted Modification (Continued)

| Change ID | System Component | Modification | 2005 VVSG Requirement | |
|-----------|------------------|--|--|----------|
| | | | Volume 1 | Volume 2 |
| ENH31370 | ERM | In the ERM Change Control File menu option, added support for auto-creation of the ERM Results XML file with a user defined lapse time interval (in minutes) or number of precincts processed interval. During the Process DS200 Memory Device results upload function, the ERM Results XML file is created at the user defined interval | ENH31370 | ERM |
| ENH32553 | ERM | Enhanced ERM to allow validation of ExpressVote sticks. This enhancement caused the existing menu path to change from: Tabulators DS200 Post Election Audit "Validate Results Media" or "Print Results Validation Media Log" to: Tabulators Post Election Audit "Validate Results Media" or "Print Results Validation Media Log", eliminating the portion of the path that specifies "DS200" | 2.4.4 a, b, & c; 2.4.3.b & e; 4.1.7.2 a, b, & c; 5.4.4 | 6.7 |

END OF TEST REPORT
